

Guidelines for LANDSCAPING

Initial Landscaping:

Planting Seed or Over-Seeding: Apply *Seed Coat* @ 4 Oz (dry weight)/50 pounds of seed.

Transplanting Bedding Plants, Shrubs and Trees: Dilute *Plant Power* @ 2 Oz/gallon of water and use as final water after planting. May be repeated on 7 to 10 day intervals if needed.

Prior to Laying Sod: Broadcast spray *Soil Solution* @ 0.75 Oz/1,000 sq ft (32 Oz/acre).

Immediately After Laying Sod: Broadcast apply *Plant Power* @ 0.50 Oz/1,000 sq ft (24 Oz/acre).

Hydro-Seeder: Simply add *Plant Power* directly into the Hydro-Seeder tank after water but before any other ingredients, mix well, then add other ingredients. Rate is 0.75 Oz/1,000 sq ft (see brochure).

Landscape Maintenance:

Bedding Plants and Shrubs: Spray a fine mist of dilute *Plant Power* over foliage avoiding excess run-off during growing season (minimum of monthly). *Plant Power* may be applied weekly as needed. Dilute *Plant Power* @ 2 Oz/gallon of water in sprayer or apply in boomed spray rig at a rate of 24 Oz/acre.

Foliar for Turf: Broadcast apply *Plant Power* @ 0.50 Oz/1000 sq ft (24 Oz/acre). May also be applied shortly after turf green up or two to three weeks after green up.

NOTE: *Soil Solution* may also be applied on green turf where heavy thatch is an issue.

Turf: Spring-Summer to Early Fall Foliar Application: Apply *CropKarb* @ 0.75 Oz and *Iron Plus* @ 0.25 Oz/1000 sq ft broadcast. Repeat monthly or as needed to maintain healthy turf.

Turf: Late Summer, Early Fall Application: Apply *CropKarb* @ 0.75 Oz and *Iron Plus* @ 0.25 Oz/1,000 sq ft broadcast.

Trees: Applications may be made year round, but for optimum results, make applications at *Bud-Break* in late winter/early spring and again prior to fall *Leaf-Drop*. Depending on tree trunk diameter, cut a notch in the soil with a sharp shovel to a depth of at least 8 inches halfway to the drip line. Dilute *Plant Power* in water @ 2 Oz/gallon and fill each hole. Seedling to 2 inch diameter-one hole, 2 to 4 inch diameter- two holes one on each side of trunk), over four inch diameter-four holes equal quadrants around tree drip line. This same dilution of *Plant Power* may also be applied on foliage as a fine mist.

NOTE: *CropKarb* may be replaced with a tank-mix of *Potassium Plus* @ 32 Oz, *PercPlus* @ 8 to 16 Oz, and *Boron Plus* @ 4 Oz. *PercPlus* may be substituted for *Plant Power* and vice-versa in any application and at the same rate.

Mixing: Always dilute *Potassium Plus* in water first, and follow with other ingredients in listed order to avoid excessive foaming.

These **DeltAg Guidelines** have been utilized to improve overall crop health and are not intended to be utilized as a replacement for basic and customary fertilizer applications. **“Other Crop Specific Guidelines are available upon request.”**
