DeltAg Product Brief

April 11, 2014

Late Plantings

No Time for Weak Stands

Seed Coat Sprinkle Stir & Plant
on Seed at Planting

PercPlus Foliar
over Seedling Corn

CropKarb Wheat @ Boot or Early Flag
Over Wheat

Late Planting & DeltAg Seed Coat:

With the harsh winter we have experienced nationwide it is a wonder any field work or planting has been accomplished. Knowing our corn crop is now late, it is imperative that we get a uniform healthy stand with quick early growth. ***Seed Coat*** from **DeltAg** is a dry powder vitamin pack for seed. Healthy development of mycorrhizae within the root system helps make moisture and nutrients more readily absorbed into the root system. This is a dry material that you simply sprinkle, stir and plant your crop. No need for any additional lubricant for precision planting. Get reduced friction, more uniform seed placement and a more consistent stand..... ***Seed Coat from DeltAg!***

Stressed Seedling Corn & DeltAg PercPlus:

A foliar application of 16 to 24 ounces/acre over seedling corn. This helps keep crop development on track without weather delays.

Don't let cold, damp weather set your crop back. ***Apply DeltAg PercPlus!***

NOTE: ***PercPlus*** is great with in-furrow starters.

Push Wheat Health Now with DeltAg CropKarb:

With much wheat very close or beginning to move into the boot stage or at head emergence, it is time to make that final push for better yield. ***CropKarb*** from **DeltAg**, at 32 ounces/acre, when applied at boot or initial head emergence contains a supplemental potassium source along with ***DeltAg Boron Plus***. Don't delay plans to boost your yields with ***DeltAg CropKarb***. Often applied with fungicides.
