Don't Let Stress Slow Seed Performance!

DeltAg Product Brief
March 12, 2010

Apply *DeltAg Seed Coat* at planting

For Less than \$1.00 You Can Eliminate Talc...

DeltAg Seed Coat is a SIMPLE TO USE, dry, powdered seed treatment applied to seed the day you plant. The more stress, the more benefit received from *Seed Coat*. Under ideal conditions, *Seed Coat* may show very little benefit.

How Do I Apply Seed Coat? As a dry seed treatment, simply replace your talc and apply *Seed Coat* to the bulk bag of seed or the seed hopper at a rate of one to two ounces per acre and lightly stir it into the seed before planting. 12.5 Lb Pail - Treats 3,000 to 5,000 Lbs of Seed (4 ounce scoop included)

Common Questions About Seed Coat:

What type seed? Any type Seed! Soybean... Cotton... Corn... Rice... Grass... Vegetables

Can I apply too much to the seed? No! Only so much will adhere to the seed. Follow Label Directions.

Is Seed Coat harmful in any way? No! *Seed Coat* is formulated with all natural ingredients.

How long will Seed Coat stay good if not used? Indefinitely! Keep the container closed and the *Seed Coat* dry!

Does Seed Coat replace Seed Inoculants? No! Bacterial inoculants should still be used when planting legumes.

On what soil types will Seed Coat work? Any soil type!

Will Seed Coat work in any weather conditions? *Seed Coat* is designed for the weather conditions that are present, provided enough moisture to germinate the seed is present.

Does Seed Coat replace talc? Many growers have found planters to work well with *Seed Coat* with or without talc.

Product Display Idea

The *DeltAg Seed Coat* pails can be displayed in your business as a pyramid. Several Dealers have found this to be a great way to promote interest and remind the Sales Rep to tell their clients about *DeltAg Seed Coat*.
