

# *Boron Plus* RATE CONVERSION CHART

Research and field experience have proven **Boron Plus** to be a very efficient source for Boron as it compares to other boron sources. **DeltAg's** standard for **Boron Plus** has always been based on comparisons to one pound of dry soluble 20.5% Boron powder.

Our standard has been 4 fluid ounces of **Boron Plus** to match or surpass the tissue analysis of one pound of dry material in solution.

It should also be noted that the more dry 20% Boron per acre is applied per application, the less efficient the response for each additional pound.

We have therefore developed the following chart for rating purposes based primarily on many years of field experiences.

## **FOLIAR APPLICATION:**

<b>DRY 20.5% MATERIALS (LBS PER ACRE)</b>	<b><i>Boron Plus</i> (FLUID OZ PER ACRE)</b>
1.0	4.0
1.5	5.5
2.0	7.0
2.5	8.5
3.0	10.0
3.5	11.5
4.0	13.0
4.5	14.5
5.0	16.0

## **SOIL APPLICATION:**

Apply 4 ounces of **Boron Plus** for every pound of Dry material recommended.

## **MAXIMUM APPLICATION RATE OF *BORON PLUS*:**

**Soil:** 24 ounces/acre/season

**Foliar:** 8 ounces/acre/application
